R134	The data group/attribute shall not be used if the message is sent to the 'Person lodging the ENS'. If the message is sent to the 'Trader at Entry (Carrier)' and if the same data group/attribute is present in the ENS, then it shall be present.
R136	The data group shall contain only the 'Document Type (Box 44)' which refers to transport documents.
R145	At least one occurrence of this data group must be present in the message.
R147	The data group shall be used if the ENS to which the message refers to contains one or more 'Document Type (Box 44)' which refers to transport documents. All declared transport documents shall be included in the message.
R148	The data in the IE corresponds always to the current (latest) version of the data. This means that it contains the amended declaration data (if any) and/or the revised declaration data after a control (if any).
R160	The data group CONTROL RESULTS must be present in case the declaration is submitted under simplified procedure.
R221	Even if the IE is sent for one or more goods items of an ENS (but not for all of them), the following attributes shall contain the totals for the complete ENS (for all items declared in the ENS): <ul style="list-style-type: none"> • Total number of items (box 5) • Total number of packages (box 6) • Total gross mass (box 35)
R230	This attribute is used as a flag, its value can be either "0" ("no") or "1" ("yes").
R410	The IE consist of top level data groups. Each top level data group has its own data group ACTION which attributes apply to the top level data group and its subsequent sub data groups. The sender of the IE will always (in case of Create, Update and Delete) send all values of the occurrence. The "Operation" attribute is used to indicate what action is applied to the occurrence in the IE. Its value can be: "C" (create), "U" (update), "D" (delete). The "Validity date" together with the attribute "Modification Subtype" allow the following mechanism; An occurrence becomes invalid as of the specified "Validity date" when the value of "Modification Subtype" is set to "0" (implies an implicit end date). An occurrence and all values of the attributes become valid as of the specified "Validity date" when the value of "Modification Subtype" is set to "1". The values of the attributes become applicable as of the "Validity date" when the value of "Modification Subtype" is set to "2" (this is when the value of the attribute(s) change). "C" (create) : The create operation is used to create a new occurrence of an entity; "U" (update): The update operation is used to change an existing occurrence. It can render an existing occurrence invalid or it can modify existing values of attribute(s) of an occurrence; "D" (delete): The delete operation is used to physically delete an occurrence. This operation must only be used when data has been created erroneously.
R411	The 'Operation' attribute is used to indicate what action is applied: 'C' (create), 'D' (delete). In case of "updates", the data group 'SYSTEM UNAVAILABILITY' to be updated will be first deleted and then (re)-created.
R422	This attribute refers to the content of Column 2 in the UN/LOCODE. Column 2 shows the names of the locations (city names) which have been accepted for inclusion in UN/LOCODE, in accordance with the provisions of Recommendation n° 16 (see Rule 460).
R425	The attribute "Season Code" is NOT used as a flag. It is possible to have up to 9 different "seasons" in a year, depending on a defined time period, which is completely covering the year-period.
R430	The "Day in the week (end)" must be equal or greater then the "Day in the week (begin)".
R445	The SENSITIVE GOODS CODE consists of two parts: the first part represents the HS6 six digit commodity code of the TARIC system, the second part represents the "Sensitive Goods Code" which is a two numeric digit code, to be defined by DG TAXUD. This two digit numeric "Sensitive Goods Code" is only used when the 6 digit HS6 code is not specific enough to identify the concerned goods (example: the codes "0405xx" and "2208xx" in the TARIC system cover both sensitive and non sensitive goods, or more than one sensitive good, and must be extended to 0405xx.01 and 2208xx.01 in order to uniquely identify the sensitive goods). These codes are used in the "List of Goods which when transported give rise to an increase in the Flat-rate Guarantee" (see proper domain).
R456	For "Package Code" use the alphabetic two-digit UN-code going from "AE"= "aerosol" to "WB" = "Wickerbottle".
R460	This UN/LOCODE refers to the 3 digit alphabetical code of the second part of Column 1 in the UN/LOCODE - Code for Ports and other Locations. Column 1 shows in a first part the ISO 3166 alpha-2 Country Code, which is followed by a space and a 3-alpha code for the city (location) name: XX XXX. This combination is invariably identifying the "City Name". This UN/LOCODE city name is used as an attribute in the "CUSTOMS OFFICE LSD" entity.
R486	This attribute can be used to indicate potential specific characteristics of the Customs Office, namely regarding variation of opening hours (e.g. during public holidays, etc.), operational and/or procedural restrictions (e.g. competent only for simplified procedures, competent only for certain goods, the only office authorised to accept flat-rate guarantees, etc.). This attribute will be coded by DG TAXUD after clear definition of the need of the NAs.
R489	Reference Number Main Office is used to indicate the Customs Office (local) to which the Customs Office in question is subordinate. The use of this attribute is left up to the NAs.
R490	Reference Number Higher Authority is used to indicate that the Customs Office in question has a higher authority. As a consequence this attribute becomes required when the Office in question has a higher authority.
R495	Reference Number Take-over is used to indicate another Customs Office that replaces (take-over) the Customs Office in question when the latter is no longer able to perform NCTS operations.
R500	At least 1 of the 4 attributes must be present.
R660	The time has to be given in the format YYYYMMDDHHMM where: YYYY = Year MM = Month DD = Day HH = Hour MM = Minute

R895	Only the Trader to whom the Office concerned is sending the advanced intervention notification (IE351) shall be used in the message.
R896	The data group 'TRADER Representative' can be used by the 'PERSON Lodging the entry summary declaration' to authorise a Representative to amend an Entry summary declaration on his behalf at the Office of first Entry concerned. If preventive/prohibitive measures are to be taken (IE351) or if controls at Entry are to be communicated to the trader prior to the arrival at Entry (IE351), the trader identified here, will be receiving the 'Advanced intervention notification' – IE351.
R897	The attribute shall refer to the item number of the requested Entry summary declaration.
R899	The country code is required to enable ICS to request the ENS data and the safety and security risk analysis results from the Office of first Entry declared in the ENS (e.g. in case of international diversion or where the forwarding of risk information failed for any reasons). It shall correspond to the first and second digit of the 'Customs Office of first Entry' declared in the Entry summary declaration.

TR0203	This data item is Optional/Dependent when NTA/NECA/NICA does not send AAR/AER/ATR/EXS/ENS in response to the request; otherwise not used.
TR0700	Values of field 'type' must be identical throughout the message (i.e.: same value in all the repetitions of the "System Unavailability" group).
TR0702	Note that the IE71 is a replica of the IE70 and so the same conditions and rules can be applied. In case of unscheduled unavailability the 'down time to' of the IE70 is optional. For the purpose of consolidation, IE70 with Type 'U' or 'N' that have no value for 'downtime to' are considered as being ongoing. This means that when a IE70 is received by the system with an empty 'down time to'-field, the timer will keep on running until a new IE70 is received containing a filled in 'down time to'-field.
TR0703	Within a single "SYSTEM UNAVAILABILITY" data-group, the "Downtime from" must be prior to the "Downtime to".
